INTRODUCTION

Following an exceptional period of growth in Biocomposite these recent years, in application as diverse as aerospace and automotive, a resurgence of interest is needed to sustain this area of research in the form of research meetings. Many years of cumulative research has been conducted by researchers in Malaysia on the usage of Biocomposite over a wide range of applications but very little of this topic is dealt systematically. This symposium has the aim to promote an academic gathering focusing on renewable resources used in composite material nowadays and improving learning experience of the postgraduate students by providing an opportunity to present their research findings. This symposium also collects some of the technological challenges that are confronted nowadays in creating BIOCOSPOSITE towards a broader market composed with possible elucidations.

OBJECTIVES

1. To provide an academic gathering focusing on biocomposite technology.
2. To raise awareness the idea of disseminating the biocomposite research.
3. To enhance postgraduate students learning experience via engaging in research discussions.
