

## Taman Rekreasi Paya Bakau Kg. Sijangkang

ID No.: S008

Nama Saintifik/ *Scientific Name*: *Xylocarpus moluccensis*

Nama Tempatan/ *Local Name*: Nyireh batu

Famili/ *Family*: Meliaceae

Photo source: [www.inaturalist.org](http://www.inaturalist.org)

**Use and Trade:** This species is used for woodcraft and is an excellent hard wood for furniture and carvings.

### Julat geografi/ *geographic*

**range:** Bangladesh, Brunei Darussalam, India, Indonesia, Malaysia, Myanmar, Philippines, Singapore, Thailand, Viet Nam, and Cambodia.

**Habitat & ecology:** This species lives slightly more inland than *X. granatum* which occurs closer to riverbanks. This is a completely deciduous species. This species has peg or cone-shaped pneumatophores and differs from *X. granatum* which has snake-like buttress roots.

**Population:** This is a common species, but not as common as *X. granatum*. Although there is no species-specific population information, it can be assumed that there are areas of population decline throughout its range due to coastal development.
